Added Security and Accountability With User Statistics In Process Safety Enterprise®

2018-04-03 - Corporate Communications - Comments (0) - News

An Added Layer of Security and Accountability:

Companies and managers can now view a User Statistics page within Process Safety Enterprise® to see the activity associated with a specific registered user.

Know who downloaded, updated, or shared your corporate documents, forms, and workflows. You can generate reports filtered by activity, date, and user to gain insight into a project or process. This function improves accountability as well as security by keeping electronic records of who has touched your company's or customer's information.

ioMosaic is committed to leveraging the latest technology to maximize tool performance. Check back often to see the latest information about ioMosaic software and technology solutions.
