Mitigate More Effectively With ioAnalytics

2019-08-13 - Corporate Communications - Comments (0) - News

Introducing Process Safety Enterprise® ioAnalytics – an advanced data mining tool that quickly identifies impacted systems and highlights KPIs and Risk Prioritization for safety professionals tasked with project mitigation.

Benefits Include

- More time for implementation
- Drastically reduced time in data collection
- Significant cost savings

ioAnalytics was designed (used by) safety professionals who understand the challenges associated with relief systems data lifecycle management. ioAnalytics provides quick, safe, all-inclusive data runs identifying units and tag systems with inadequate valve sizing or are in excess of the standard 3% inlet pressure loss rule (IPL3). It even automates and creates discussion lists!

By leveraging data from Process Safety Office® and Process Safety Enterprise®, ioAnalytics provides a comprehensive snapshot of your process safety management and operations to help you mitigate more effectively.
