Process Safety Office® V8.3 Delivers Two New Features

2017-07-28 - Corporate Communications - Comments (0) - News

Let the 64-bit Ring:

A true 64-bit application for all Process Safety Office® components has arrived with v8.3. Using v8.3 will give you full access to all the memory available on your computer. Together with the existing parallel computing capabilities and multi-processor support power, our most computing intensive component, SuperChems™, is now faster and more efficient than ever.

The QRA Spinoff:

Meeting the needs of our many users working specifically on consequence modeling and quantitative risk analysis, v8.3 provides a separate QRA interface. The QRA application enables users to place scenarios directly on a facility sitemap and create loss of containment source terms seamlessly.
