Sign With Your Digital E-Signature In Process Safety Enterprise®

2017-12-21 - Corporate Communications - Comments (0) - News

A Secure, Trackable, and Flexible E-Signature:

This e-signature solution allows users to review, fill out, and sign contracts and agreement letters, along with processes within built-in workflows, without leaving the Process Safety Enterprise® platform.

For signing off on agreement letters or final project deliverables, the Process Safety Enterprise® e-signature is the fast, secure, and efficient solution. Rather than manually prepare forms to send your clients via email, followed by constantly checking the status after email is sent, make the process easier for everyone involved with Process Safety Enterprise® e-signature.

With a newly implemented digital signature function, all you need to do is click on the signature button, create signing tabs, and send a signature request to your client as part of any workflow process. Like any pending workflow status, Process Safety Enterprise® will automatically follow-up on the status of pending signatures so you can use your time more effectively.
