

Time to Upgrade to Process Safety Office[®] v8.4

2018-08-09 - Corporate Communications - Comments (0) - News

Universal Vessel Dynamics Model for SuperChems[™] Now Available in Process Safety Office[®] v8.4

ioMosaic is pleased to announce the release of Process Safety Office[®] v8.4. While there are substantial additions and enhancements to this new release, the most significant change is the arrival of the universal vessel dynamics model for SuperChems[™] component.

The universal model is designed to handle all types of complex retrograde and phase transient flows. Users now are equipped with a fundamental tool for modeling relief and depressurizing systems with seamless phase boundaries transition.

Bonus - Register for a Live Demo of PSO v8.4

Existing users can sign up to view a live demo of our Process Safety Office[®] v8.4 on August 21, 2018. Contact sales@ioMosaic.com to reserve your seat now.

How to Run scripts in SuperChems[™]

The ability to run user-defined scripts is available to Process Safety Office[®] SuperChems[™] Enterprise. Users can enhance productivity by using scripts to manipulate and direct the SuperChems[™] engine. To run your scripts:

1. Go to "Scripts" drop-down menu
2. Select Load and navigate/select your scripts
3. Select Run and choose from the available scripts

Several standard scripts included in the program can be found here (replace "x.y" with your version number): C:\iOiQ\PSOx.y\SuperChems\WSUPER
