Upgrades to Action Item Tracking and Form Building in Process Safety Enterprise®

2018-06-28 - Corporate Communications - Comments (0) - News

New Action Item Tracking

A new action item tracking feature allows users to ADD, EDIT, and SEARCH action items. New notification feature triggers automatic email updates to be sent on the status of tasks. This new, auto feature eliminates the time-consuming task of constantly checking the website to view a team's progress.

New Form Builder with Drag-and-Drop Function

Our new form builder engine allows users to easily create powerful and complex online forms with a new drag-and-drop feature. Add as many tabs as you like, drop your desired components onto the canvas, and adjust the appearance to your liking. Once saved, your newly created form is readily available and can be easily accessed.
